## SUMMARY

Broadly interested in the theory and applications of scalable statistical inference methods for high-dimensional systems. Particularly Bayesian methods which report uncertainty e.g., MCMC. Here are a couple of biological applications I work on:

(1) Using statistical inference to probe structural properties of neural microcircuits, either in-vivo or in-silico. This involves a broad range of theoretical tools derived from physics, information theory, stochastic processes, and Bayesian statistics.

(2) Bayesian methods and dimensionality reduction to study heterogeneity of the transcriptome in triple negative breast cancer and its association with the immune response. Inference applied to single-cell high throughput sequencing data allows us to identify biomarkers in tumors which can then be visualized in their native spatial context using high-throughput fluorescence imaging.

## EDUCATION

*Doctor of Philosophy, Physics*  
Purdue University, West Lafayette, IN, 2024  
Thesis: *In progress*

*Master of Science, Biophysics*  
University of Chicago, Chicago, IL, 2021  
Thesis: *Towards a theory of stable cell assembly formation in excitatory-inhibitory neuronal networks*

*Bachelor of Science, Magna Cum Laude, Physics*  
Purdue University, Indianapolis, IN, 2019  
Minor: Mathematics

*Bachelor of Science, Magna Cum Laude, Informatics*  
Luddy School of Informatics, Computing, and Engineering, Indiana University Bloomington, 2019  
Concentration: Mathematics

## COMPUTER SKILLS

*Languages & Software:* Python, R, PyTorch, C, Git, LaTeX, Bash, Linux

## EXPERIENCE

*Research Technician* 2019-2021  
Indiana University - Purdue University, Indianapolis, IN

- Develop an image processing software pipeline for high-throughput quantification of images in fluorescence microscopy
- Utilize high performance computing clusters for image segmentation, single particle tracking, and image registration

*Undergraduate Researcher* 2019-2020  
Indiana University - Purdue University, Indianapolis, IN

- Utilize time-correlated single photon counting (TCSPC) to characterize the sub-Poissonian emission of organic quantum dots dispersed in a thin film of

- poly-methyl methacrylate (PMMA)
- Design and utilize a 3-color imaging protocol to perform single-molecule imaging of mRNA transcripts in human epithelial kidney and osteosarcoma cells

*Undergraduate Tutor* 2018-2019

Indiana University - Purdue University, Indianapolis, IN

- Tutored undergraduate students in introductory physics courses covering classical mechanics, classical electromagnetism, circuit analysis, and modern physics

## AWARDS

*PS-ON Annual Investigator Meeting Travel Award* 2019

Indiana University - Purdue University, Indianapolis, IN

*Hudson and Holland Scholarship for Diversity and Inclusion* 2013-2017

Indiana University, Bloomington, IN

*Founders Scholar* 2013-2017

Indiana University, Bloomington, IN

*Cigital Scholarship* 2016-2017

Indiana University, Bloomington, IN

*Dean's List* 2013-2019

Indiana University, Bloomington, IN
